SARA ELECTRONICS

Admin Operations Guide

Admin journey and platform feature guide

A presentation-ready guide to how administrators operate the Sara Electronics platform: access, daily control, catalogue, sales, customers, campaigns, stores, partners and system governance.

01 Admin journey

02 Operational workflows

03 Platform features

04 Controls and governance

Prepared for Sara Electronics

October 2026

PURPOSE

The admin panel is the operating system of the business

Administrators use one controlled workspace to manage what customers see, what they can buy, how orders progress, how campaigns run and how the platform is configured.

> **The admin journey converts business decisions into customer experience: catalogue accuracy, fulfilment speed, marketing relevance and operational trust.**

1 Observe
Review revenue, fulfilment, inventory, customers and recent activity.

2 Prioritise
Identify low stock, pending orders, customer issues and campaign opportunities.

3 Act
Update products, orders, content, campaigns, stores, partners and settings.

4 Verify
Confirm storefront output, payment state, delivery progress and reporting.

Current administration structure

Navigation group	Business responsibility	Typical users
Overview	Performance and operational health	Leadership, admin managers
Catalogue	Products, taxonomy, specifications, images and software	Merchandising, catalogue team
Sales	Orders, payments, offers and fulfilment	Order desk, finance, store staff
Customers	Profiles, leads, support and communication	CRM, support, marketing
Storefront	Homepage, promotions, content and visual merchandising	Marketing, content team
Campaigns	Gamification and customer acquisition programmes	Campaign managers
Stores	Locations, QR journeys and serviceability	Retail operations
Partners	B2B accounts, API access and payouts	Partner operations, finance
System	Store configuration, permissions and documentation	Superadmin, technical owner

SECURE ENTRY

Admin access and permission journey

Access is checked before admin content is rendered. Staff can then receive only the pages required for their role.

STEP 1	STEP 2	STEP 3	STEP 4	STEP 5
Sign in	**Authorise**	**Filter**	**Operate**	**Audit**
Authenticated session	Role or dashboard access	Allowed admin pages	Use approved tools	Review outcome

ADMIN

Full operational role

Suitable for trusted managers responsible for catalogue, sales, content, customers and campaigns.

SUPERADMIN

Highest control level

Suitable for system ownership, sensitive settings, staff access and critical platform decisions.

STAFF ACCESS

Granular page access

Dashboard access and allowed-page claims support narrower responsibilities without sharing full admin control.

Permission design examples

Staff profile	Recommended pages	Pages normally restricted
Catalogue executive	Products, catalogue, specifications, image coverage, scraper	Payments, partners, settings
Order executive	Orders, bulk update, external orders, customers	System settings and partner keys
Marketing executive	Campaigns, email, homepage, posters, promotions, custom pages	Payments and technical configuration
Store manager	Employees, store QR, QR analytics, leads and selected orders	Global catalogue and partner controls
Finance manager	Payments, orders, partner payouts and dashboard	Content and catalogue editing

Security rule: navigation visibility is not the security boundary. Every sensitive API action must also verify the authenticated role or permission on the server.

Access principle: grant the minimum pages needed for the job, review access when responsibilities change, and reserve superadmin rights for a small number of accountable owners.

END-TO-END WORKFLOW

The administrator's operating cycle

The most effective admin journey follows a repeatable loop rather than isolated page updates.

1. START
Review dashboard
Select the date range and check realised revenue, fulfilment pipeline, orders, AOV, customers, products and low-stock signals.

2. TRIAGE
Resolve exceptions
Prioritise pending or delayed orders, payment issues, stock risks, complaints, contact inquiries and lead follow-up.

3. MAINTAIN
Update core data
Keep products, categories, brands, specifications, images, prices, offers, serviceability and store details accurate.

4. MERCHANDISE
Shape the storefront
Schedule hero content, homepage sections, promotional banners, advertisements, buying guides and campaign pages.

5. ENGAGE
Run campaigns
Select audiences, prepare email or WhatsApp plans, configure coupons, spin campaigns, lucky draws and local QR activations.

6. VERIFY
Check customer output
Preview the storefront, test links and offers, confirm order/payment updates and review campaign delivery or analytics.

7. IMPROVE
Export and learn
Use dashboard, order, campaign, QR and spin reports to identify the next operational or commercial action.

Admin outcome map

Accurate
Products, price, stock, content and settings match reality.

Responsive
Orders, leads and customer issues move without avoidable delay.

Relevant
Campaigns and storefront content fit audience and season.

Measurable
Important actions produce visible business outcomes.

Recommended habit: begin with exceptions, not content creation. Protect existing customers and active orders before launching the next promotion.

COMMAND CENTRE

Dashboard and business visibility

The dashboard is designed for rapid performance review and direct navigation to the underlying operational work.

Revenue
DELIVERED/COMPLETED ORDERS

Pipeline
AWAITING FULFILMENT

Orders
VOLUME AND AOV

Customers
TOTAL AND NEW

Stock
ACTIVE AND LOW STOCK

Date-based analysis

- Preset ranges: 7, 30, 90 and 365 days or all time
- Custom from/to date selection
- Comparison deltas for revenue, orders and AOV
- Daily revenue, booked value and order trend

Operational breakdown

- Orders grouped by current status
- Payment methods with order count and value
- Realised, pipeline and cancelled/returned value
- Recent order visibility for fast follow-up

Commercial intelligence

- Top products by units and revenue
- Average order value
- New customer count in selected range
- Product activity and low-stock warning

Reporting

- Excel workbook export
- Summary, daily, status and payment sheets
- Top-product and recent-order sheets
- Direct links from key cards into admin modules

Suggested daily dashboard questions

Question	Signal	Admin action
What requires attention now?	Pipeline, pending status, recent orders	Open orders and assign next steps
Are sales converting into fulfilment?	Booked value versus realised revenue	Investigate delayed or cancelled orders
What may become unavailable?	Low-stock count and product activity	Restock, deactivate or adjust merchandising
What should be promoted?	Top products, category demand, inventory	Update homepage or campaign focus

PRODUCT OPERATIONS

Catalogue, taxonomy and product quality

Catalogue administration controls product discovery, pricing clarity, stock confidence, search visibility and checkout accuracy.

P Products

Create, edit, activate, deactivate, search and manage product data, pricing, images, stock and metadata.

`/admin/products`

T Categories & brands

Manage categories, sub-categories and brands through a consolidated catalogue workspace.

`/admin/catalogue`

S Specifications

Import, fetch, lock, edit and synchronise detailed product specifications.

`/admin/product-specifications`

I Image coverage

Identify products with incomplete visual assets and improve catalogue presentation.

`/admin/image-coverage`

A Product scraper

Extract product information for review and controlled import rather than direct unverified publishing.

`/admin/scraper`

D Software catalogue

Manage software products, validity/device options and licence-key inventory.

`/admin/software`

Key catalogue capabilities

Capability	Admin value	Customer impact
Product CRUD and status	Control exactly what is available	Prevents inactive or incomplete products appearing
Bulk upload and updates	Maintain large catalogues efficiently	Faster price and metadata accuracy
Canonical schema migration	Standardise inconsistent records	More reliable filtering and display
Taxonomy management	Keep navigation structured	Easier search and browsing
Specifications and images	Increase product completeness	Greater decision confidence
Software licence keys	Protect digital fulfilment inventory	Reliable post-purchase delivery

Publishing control: imported or scraped content should be reviewed for title, brand, category, price, stock, images, specifications, warranty and customer-facing accuracy before activation.

REVENUE OPERATIONS

Orders, payments, offers and fulfilment

Sales administration takes an order from initial review through payment confirmation, fulfilment, tracking and completion.

1 **Receive** — Order and payment data
2 **Validate** — Customer, items, payment
3 **Process** — Status and assignment
4 **Dispatch** — Tracking number
5 **Complete** — Delivery or licence

Orders

Search, filter, review customer and item details, update status, manage tracking, access invoices and handle software fulfilment.
`/admin/orders`

Bulk order update

Upload and preview multiple order-status and tracking changes before applying them.
`/admin/orders/bulk-update`

External orders

Monitor third-party fulfilment orders, retry failures and cancel queued work where supported.
`/admin/external-orders`

Payments

Review payment transactions, status and online versus in-store payment activity.
`/admin/payments`

Coupons & offers

Create and manage discount programmes, eligibility, validity and promotional presentation.
`/admin/promotions`

Employees

Manage employee references used by in-store purchase and operational flows.
`/admin/employees`

Order desk checklist

- ✓ Confirm payment method and payment status
- ✓ Check customer contact and delivery address
- ✓ Review product, quantity and fulfilment type
- ✓ Update order status only after real progress
- ✓ Enter a correct tracking reference
- ✓ Assign software licence keys safely
- ✓ Notify the customer of meaningful changes
- ✓ Record cancellation, return or refund accurately

Financial control: customer-facing totals must be based on server-verified product, coupon, shipping and payment data. Admins should investigate discrepancies rather than manually masking them.

CUSTOMER OPERATIONS

Customers, leads, support and communication

Customer administration combines identity, commercial history, service cases and permission-aware communication.

C

Customers

Search customer records, review detail and understand the relationship around accounts and orders.

`/admin/customers`

L

Leads

Capture, categorise, follow up and move leads through new, contacted, interested, converted or closed states.

`/admin/leads`

Q

Complaints

Review structured complaints, evidence, order references, status and internal notes.

`/admin/complaints`

I

Contact inquiries

Manage general customer messages from new through contacted, resolved or archived.

`/admin/contact-inquiries`

M

Campaigns & email

Select templates, edit content, choose recipients, preview and send with progress visibility.

`/admin/customer-centric`

E

Email templates

Create and maintain reusable promotional and lifecycle email content.

`/admin/customer-centric/templates`

Four-step campaign journey

STEP 1	STEP 2	STEP 3	STEP 4
Pick template	**Edit content**	**Choose recipients**	**Preview & send**
Saved or prepared content	Subject, body, image, CTA	Segment, search or import	Review, batch and monitor

Customer-care principle: order history, complaint context and communication consent should guide the response. The objective is resolution and trust, not only closing the admin record.

Marketing dependency: WhatsApp plans require provider configuration and customer opt-in. Scheduled cart, wishlist and lifecycle campaigns require secure scheduler activation.

DIGITAL MERCHANDISING

Homepage, content and promotional presentation

Storefront administration controls the visual hierarchy customers see before they open a product page.

Admin module	Feature purpose	Customer-facing effect
Homepage Sections `/admin/home-components`	Create, publish, hide, duplicate and reorder curated sections	Controls category rails, featured collections and homepage storytelling
Hero Posters & Slides `/admin/posters`	Manage primary campaign visuals, CTA and order	Defines the first promotional message
Banners & Promos `/admin/listing-banners`	Place promotional assets within listing experiences	Connects category browsing with current campaigns
Theme & Festivals `/admin/theme`	Coordinate visual themes and seasonal moments	Creates timely, consistent festival experiences
Site Features `/admin/features`	Manage service and trust messages	Communicates benefits such as delivery, support or assurance
Product Ads `/admin/product-advertisements`	Promote specific products through managed placements	Increases visibility for selected inventory
Advertisements `/admin/advertisements`	Create and maintain general advertising assets	Supports wider promotional campaigns
Custom Pages `/admin/campaign-pages`	Build slug-based campaign landing pages	Provides a focused destination for paid, email, social or QR traffic
Buying Guides `/admin/articles`	Publish educational editorial content	Helps customers understand categories and choose products

Content publishing workflow

BRIEF	BUILD	CHECK	PUBLISH	LEARN
Objective	**Creative**	**Preview**	**Schedule**	**Measure**
Audience and outcome	Copy, image, CTA, products	Desktop and mobile	Visibility and timing	Engagement and sales

Merchandising rule: every banner and homepage section should have one clear purpose, a valid destination, current products and a defined removal or review date.

ENGAGEMENT PROGRAMMES

Spin wheel, campaign control and lucky draw

Gamification tools support acquisition, store activation, coupon distribution and campaign measurement.

W

Spin Wheel

Operate dashboard, coupons, prize inventory, wheel preview, store tracking, traffic analytics and data export.

`/admin/spin-wheel`

C

Spin Campaigns

Create isolated campaigns, define slugs and status, and manage campaign-specific participation and rewards.

`/admin/spin-wheel/campaigns`

L

Lucky Draw

Manage campaigns, participants, draw operations, winners and notification workflow.

`/admin/lucky-draw`

Spin-wheel administrative features

Area	Admin capability	Control objective
Dashboard	Visitors, participants, OTP verification and completed spins	Understand funnel and campaign activity
Prize inventory	Configure prizes, availability and probability	Protect stock and campaign economics
Coupons	Generate and manage reward codes	Connect engagement to purchase
Wheel preview	Review customer-facing segments and behaviour	Validate experience before launch
Store tracking	Associate traffic with stores and QR journeys	Measure local activation
Analytics	Daily traffic, drop-off, registrations and spin success	Improve campaign effectiveness
Export	Download campaign data for analysis	Support reporting and reconciliation

Campaign control: prize probability, inventory and coupon issuance must be tested before activation. Never change reward economics mid-campaign without an approved reason and documented customer treatment.

LOCAL OPERATIONS

Store locations, QR engagement and serviceability

Store administration connects the online platform with local retail presence and delivery constraints.

S — Store locations

Manage store information used by the locator and local customer journeys.

`/admin/store-locations`

Q — Store QR codes

Create and manage QR entry points for store-specific campaigns.

`/admin/store-qr`

A — QR analytics

Review scans and store-attributed engagement.

`/admin/store-qr/analytics`

P — Blocked pincodes

Maintain delivery restrictions and serviceability controls.

`/admin/blocked-pincodes`

Local customer journey

DISCOVER	VISIT	ENGAGE	CONVERT	MEASURE
Find store	**Scan QR**	**Campaign**	**Purchase**	**Attribute**
Store locator	Store-specific entry	Spin, lead or offer	Online or in-store	QR/store analytics

Store data quality checklist

- ✓ Store name and address are current
- ✓ Phone and operating hours are accurate
- ✓ Campaign identifies the correct store
- ✓ Blocked pincodes reflect delivery operations
- ✓ Map coordinates point to the correct location
- ✓ QR code opens the intended campaign
- ✓ Expired QR campaigns are disabled
- ✓ Bulk imports are reviewed after upload

Business benefit: store and QR features make local retail activity measurable while giving customers a connected journey between physical and digital channels.

B2B OPERATIONS

Partners, API access, wallets and payouts

Partner administration supports controlled external commerce while separating partner identity, credentials, products, orders, balances and settlement.

STEP 1 — Create partner
Record the organisation and operating details required for the relationship.

STEP 2 — Issue access
Create API credentials and configure allowed domains or security settings.

STEP 3 — Assign products
Control which catalogue items and commercial terms are available to the partner.

STEP 4 — Process orders
Monitor partner orders, external references, payment and fulfilment progression.

STEP 5 — Manage wallet
Review balances, transactions, commissions and financial movement.

STEP 6 — Settle payout
Review payout requests and complete approved settlement operations.

Partner directory
Create, edit and review partners, partner detail, products and API keys.
`/admin/partners`

Partner payouts
Review and manage payout operations and their status.
`/admin/partner-payouts`

Integrations
Monitor connected-provider products, orders, transactions and integration activity.
`/admin/integrations`

Partner governance controls

Control	Purpose
API-key issuance and revocation	Limit access to approved partner systems and respond to credential risk
Allowed-domain configuration	Reduce unauthorised browser-origin use
Encrypted partner secrets	Protect sensitive payment and API configuration
Wallet transaction ledger	Maintain a traceable financial record
Payout review	Separate request from financial approval and completion
Rate limiting and CORS	Control partner API traffic and origin access

Sensitive access: partner API keys, payment credentials and payout controls should be limited to named administrators. Never transmit or store raw secrets in documents or campaign tools.

CONFIGURATION

Store settings, documentation and platform controls

System administration defines the shared rules used across the storefront, checkout and customer communication.

Store information
Manage store identity, contact details and the information used across customer-facing surfaces.

Branding
Maintain logo, signature and visual identity assets used by the platform.

Business
Configure currency, tax and pricing-related business settings.

Shipping
Control shipping fees, thresholds and related checkout behaviour.

Online presence
Maintain website, social links and selected search/visibility information.

Documentation
Provide administrators with product and operational guidance inside the admin area.

System routes and specialist tools

Tool	Purpose	Control level
Settings `/admin/settings`	Shared store, brand, business, shipping and online-presence configuration	Restricted
Documentation `/admin/documentation`	Admin guidance and reference	General admin
Migration `/admin/migrate`	Specialist data migration operations	Superadmin / technical
OTT dashboard	External operational system linked from the admin navigation	Separate credentials

Configuration safeguards

- ✓ Record the reason for material setting changes
- ✓ Preview customer-facing results after saving
- ✓ Restrict destructive tools to named owners
- ✓ Dry-run migrations before applying them
- ✓ Keep environment secrets outside admin content
- ✓ Coordinate tax and shipping changes with finance
- ✓ Keep site URLs consistent across environments
- ✓ Verify email and payment integrations after changes

High-risk actions: database clearing, schema migration, key management and global settings can affect the entire platform. Use explicit approval, backup and verification procedures.

STANDARD OPERATING JOURNEYS

Three workflows that connect multiple admin modules

Platform value comes from connected execution. These workflows show how individual admin features work together.

WORKFLOW 1

Launch a new product

1	2	3	4	5
Taxonomy	**Product**	**Content**	**Quality**	**Promote**
Category and brand	Core data and pricing	Images and specifications	Preview and stock check	Homepage or campaign

WORKFLOW 2

Fulfil an order

1	2	3	4	5
Review	**Verify**	**Process**	**Dispatch**	**Complete**
Order and customer	Payment and stock	Status and assignment	Tracking or licence	Delivery and support

WORKFLOW 3

Launch a marketing campaign

1	2	3	4	5
Objective	**Offer**	**Destination**	**Delivery**	**Measure**
Audience and KPI	Coupon or reward	Page and products	On-site, email or QR	Conversion and health

Workflow ownership: assign one accountable owner, even when several teams contribute. The owner confirms readiness, launch, monitoring and closure.

ADMIN ROUTINE

Recommended daily, weekly and monthly cadence

A clear cadence reduces forgotten exceptions, stale content and reactive administration.

DAILY

Protect active business

- Review dashboard and fulfilment pipeline
- Process new and pending orders
- Check payment or integration failures
- Respond to complaints, inquiries and leads
- Review low stock and incorrect product states
- Confirm active campaign links and offers

WEEKLY

Improve performance

- Export and review sales performance
- Update homepage merchandising
- Review product/image completeness
- Analyse campaign, spin and QR results
- Check store and serviceability changes
- Review partner orders and payouts

MONTHLY

Govern the platform

- Review staff access and allowed pages
- Audit settings and sensitive credentials
- Clean up expired content and campaigns
- Review catalogue schema/data quality
- Assess retention and customer-health metrics
- Plan seasonal content and inventory focus

Admin quality scorecard

Area	Healthy signal	Warning signal
Orders	Clear status ownership and timely progression	Growing pipeline with stale status
Catalogue	Current price, stock, images and specifications	Inactive, incomplete or inconsistent products
Customers	Leads and issues have recent accountable action	Unassigned or repeatedly reopened cases
Campaigns	Defined audience, objective, expiry and report	Always-on promotions with no owner or outcome
Access	Permissions match current job responsibilities	Shared accounts or unnecessary superadmin access
System	Changes are tested and documented	Unverified global changes or silent failures

Success standard: customers should experience accurate products, reliable fulfilment, relevant communication and consistent support because the admin operation is disciplined.

QUICK REFERENCE

Admin platform feature directory

A concise map of the main administrative workspaces currently exposed through the admin navigation.

Group	Pages and capabilities
Overview	Dashboard: revenue, pipeline, orders, AOV, customers, products, stock, charts and Excel export
Catalogue	Products; Categories & Brands; Specifications; Image Coverage; Product Scraper; Software and licence keys
Sales	Orders; Bulk Order Update; External Orders; Payments; Coupons & Offers; Employees
Customers	Customers; Leads and settings; Complaints; Contact Inquiries; Campaigns & Email; Email Templates
Storefront	Homepage Sections; Hero Posters & Slides; Banners & Promos; Theme & Festivals; Site Features; Product Ads; Advertisements; Custom Pages; Buying Guides
Campaigns	Spin Wheel operations; Spin Campaign management; Lucky Draw
Stores	Store Locations; Store QR Codes; QR Analytics; Blocked Pincodes
Partners	Partner accounts, details, products and API keys; Partner Payouts; integration operations
System	Settings; Documentation; specialist migration tools; external OTT dashboard link

Platform value delivered through admin

Commerce
Catalogue, checkout inputs, orders, payments and fulfilment.

Growth
Offers, campaigns, email, gamification, content and landing pages.

Service
Customers, leads, complaints, inquiries, stores and tracking.

Platform
Roles, settings, partners, integrations, reporting and governance.

Recommended next step: assign named owners to each navigation group, define permission profiles, and convert the daily/weekly/monthly cadence in this guide into the team's admin operating procedure.

This document is designed for screen presentation and A4 PDF export. In a browser, use **Print > Save as PDF**, enable background graphics, choose A4, and set margins to none.
