SARA ELECTRONICS

Client Experience Documentation

From first discovery to long-term customer value

A business and customer-facing guide to the Sara Electronics user journey, user experience, customer benefits, and marketing operating model.

01 User journey

02 User experience

03 User benefits

04 Marketing setup

Prepared for Sara Electronics

October 2026

PURPOSE

A connected commerce experience, not only an online catalogue

The platform supports the full customer lifecycle: attracting shoppers, helping them make a confident product decision, completing payment, tracking fulfilment, and re-engaging them after purchase.

> **The central experience promise is simple: make electronics easier to discover, safer to buy, and more valuable to own.**

1 Discover
Search, categories, brands, campaign pages, offers, store discovery and organic visibility.

2 Decide
Specifications, images, reviews, comparison, availability, delivery and pricing clarity.

3 Purchase
Cart, coupons, address validation, Razorpay, COD and order confirmation.

4 Return
Accounts, order history, wishlist, alerts, lifecycle messages and targeted campaigns.

Who should use this document

Audience	What this document explains	Primary outcome
Business owner / leadership	Commercial value, trust, conversion and retention model	Clear priorities and investment decisions
Marketing team	Acquisition, segmentation, campaigns, channels and measurement	Repeatable campaign operations
End customers	How the experience helps before, during and after a purchase	Confidence, convenience and loyalty
Operations and technical teams	Capabilities, dependencies, setup requirements and ownership	Reliable delivery and governance

Document principle: existing capabilities and recommended operating practices are separated. A feature being technically available does not mean the related campaign or scheduled automation is already active.

END-TO-END LIFECYCLE

The complete customer journey

Each stage has a customer goal, an experience responsibility and a measurable business outcome.

STAGE 1	STAGE 2	STAGE 3	STAGE 4	STAGE 5	STAGE 6
Awareness	**Discovery**	**Evaluation**	**Purchase**	**Fulfilment**	**Retention**
Find Sara	Explore options	Build confidence	Complete order	Receive safely	Return and refer

Stage	Customer need	Platform response	Business signal
Awareness	Recognise the brand and understand why it is relevant.	Search visibility, campaign landing pages, brand pages, promotions, social links and store QR journeys.	Traffic source, landing-page engagement, campaign visits.
Discovery	Quickly find products that match budget and need.	Search, suggestions, category navigation, filters, sorting, curated home sections and offers.	Searches, product-list views, filter use, product clicks.
Evaluation	Understand value, quality, compatibility and availability.	Product images, specifications, price and MRP, reviews, compare, wishlist, delivery estimate and related products.	Product views, compare activity, wishlist additions, cart additions.
Purchase	Pay with confidence and without unnecessary effort.	Persistent cart, quantity control, coupon validation, address entry, Razorpay or COD, clear order summary.	Checkout starts, coupon use, payment completion, abandonment.
Fulfilment	Know what is happening and when the order will arrive.	Confirmation, order history, tracking status, invoice access and software licence fulfilment where applicable.	Status progression, delivery completion, support contacts.
Retention	Receive useful reasons to return, not irrelevant messages.	Wishlist alerts, cart recovery, lifecycle campaigns, tailored offers, spin-wheel engagement and account history.	Repeat purchase, recovered carts, campaign conversion, unsubscribe rate.

Journey design rule: every message and screen should answer the customer's next question. Marketing should continue the journey, not interrupt it.

STAGES 1-3

From first visit to purchase confidence

Electronics purchases are information-heavy. The experience reduces uncertainty progressively instead of forcing a customer directly into checkout.

AWARENESS

Bring qualified visitors

- Search-friendly product, category and brand pages
- Campaign-specific landing pages
- Homepage banners, offers and merchandising
- Physical-store QR and promotional journeys
- Shareable product pages and WhatsApp sharing

DISCOVERY

Help users narrow choices

- Text search and suggestions
- Category, sub-category and brand navigation
- Price, availability, rating and product filters
- Relevance, price, discount and rating sorting
- Curated sections for deals and featured products

EVALUATION

Remove buying anxiety

- Image gallery and detailed specifications
- MRP, selling price and discount visibility
- Reviews and trust indicators
- Wishlist and comparison for up to six products
- Pincode delivery checks and related products

Experience questions the platform should answer

Customer question	Experience answer	Desired effect
"Do you sell what I need?"	Clear taxonomy, search suggestions, filters and visible stock state	Faster product discovery
"Is this the right model?"	Specifications, variants, images, comparison and related products	Higher decision confidence
"Am I getting a fair deal?"	Transparent MRP, selling price, discounts, offers and coupon terms	Reduced price uncertainty
"Can Sara deliver to me?"	Pincode-based delivery validation and store locator	Fewer checkout surprises
"Can I trust this purchase?"	Reviews, trust badges, secure payment choices and visible policies	Lower perceived risk

UX priority: preserve the customer's context. Search terms, selected filters, wishlist items, comparison choices and cart contents should help the user resume rather than restart.

STAGES 4-6

From cart to delivery and the next purchase

Conversion is not complete at payment. A reliable post-purchase experience protects trust and creates the permission to market to the customer again.

STEP 1 **Cart review**	Customer checks items, images, quantities, variants, pricing, tax, shipping and the free-shipping progress message.
STEP 2 **Customer details**	Profile data can reduce repeat entry. Address, city, state, phone and pincode are validated before payment.
STEP 3 **Offer and payment**	Coupon eligibility is checked and the customer chooses secure online payment through Razorpay or cash on delivery.
STEP 4 **Confirmation**	The order record, payment status, customer summary and items are confirmed with a unique order reference.
STEP 5 **Tracking**	Customers can follow progress from ordered and processing through shipping, transit and delivery.
STEP 6 **Re-engagement**	Relevant follow-ups can use purchase history, cart, wishlist, activity and consent to select the right message.

C
Conversion controls
Coupon validation, clear totals, payment choices, delivery checks and error feedback reduce avoidable exits.

T
Trust controls
Server-side pricing, payment verification, authenticated accounts and status visibility protect the transaction.

R
Retention controls
Consent-aware profiles, preference management and relevance rules protect the customer relationship.

Operational dependency: cart recovery, wishlist alerts and lifecycle reminder logic exist, but scheduled execution must be connected to Vercel Cron or another secure scheduler before these journeys run automatically.

EXPERIENCE FRAMEWORK

Six principles for a consistent user experience

These principles should guide storefront changes, campaign landing pages, account features and customer communication.

01

Clarity before persuasion

Show product, price, discount, availability, delivery and terms before asking for commitment.

02

Progressive information

Lead with decision essentials, then provide specifications and policies for users who need depth.

03

Mobile-first action

Keep search, filters, cart and primary purchase actions reachable on smaller screens.

04

Visible system status

Use loading, success, error, stock, payment and order states so users always know what happened.

05

Trust through consistency

Use consistent brand language, totals, policies, security signals and post-purchase communication.

06

Relevant personalisation

Use behaviour and consent to reduce noise, not to create intrusive or unexplained experiences.

Experience quality checklist

- ✓ Primary action is clear on every key page
- ✓ Errors explain how the customer can recover
- ✓ Mobile layouts preserve essential product information
- ✓ Keyboard focus and contrast remain visible
- ✓ Campaign pages match the promise in the advertisement
- ✓ Slow network states do not appear as failure
- ✓ Prices and discounts remain consistent through checkout
- ✓ Forms request only information needed for the task
- ✓ Images have useful alternative text
- ✓ Consent and unsubscribe choices are respected
- ✓ Order and payment states use plain language
- ✓ Support and store contact paths are easy to find

Brand tone: confident, clear, modern and approachable. Avoid technical jargon in customer-facing messages and explain the benefit before the feature.

U

End customers

What users experience and why it benefits them

USER BENEFITS

A simpler, safer and more useful buying journey

Customer value comes from reducing the effort, uncertainty and risk involved in purchasing electronics.

Find the right product faster

- Search suggestions and structured category browsing
- Filters for price, brand, rating, availability and product attributes
- Sorting by relevance, price, discount and rating
- Brand, offer and campaign pages for focused discovery

Make a confident decision

- Detailed product images and specifications
- Transparent MRP, price and discount information
- Product comparison, wishlist and reviews
- Delivery estimation and store discovery

Purchase with flexibility

- Cart quantity and item management
- Coupon validation before order completion
- Online payment through Razorpay or cash on delivery
- Saved account information for repeat convenience

Stay informed after purchase

- Order confirmation and history
- Public order tracking and status timeline
- Invoice access and software licence details where relevant
- Useful alerts and offers based on consent and interest

Customer promise by moment

Moment	Customer promise	Proof in the experience
Before purchase	"I can understand my options."	Search, filters, specifications, comparison and pricing
At checkout	"I know what I am paying and why."	Itemised totals, coupon feedback, payment choice and delivery validation
After payment	"My order has been received and is progressing."	Confirmation, account history and tracking
After delivery	"Sara remembers my relationship, not only my transaction."	Relevant lifecycle communication, preferences and tailored offers

B

Business owner and leadership

How the experience supports growth, efficiency and differentiation

BUSINESS BENEFITS

A platform for measurable customer value

The commercial opportunity is to connect storefront behaviour, transaction data and communication into one managed customer lifecycle.

C

Conversion

Better discovery, product confidence, offer validation and checkout clarity reduce avoidable purchase friction.

R

Retention

Cart, wishlist, profile and order signals support relevant reasons for customers to return.

A

Average order value

Curated merchandising, related products, coupons and free-shipping nudges can influence basket size.

O

Operational visibility

Admin tools support product, order, campaign, coupon, content and store management.

D

Data ownership

First-party account, order, preference and engagement data reduces dependence on marketplace audiences.

S

Service differentiation

Store presence, local support and post-purchase relationships create value beyond price competition.

Leadership dashboard

Business question	Recommended KPI	Decision enabled
Are qualified visitors becoming buyers?	Conversion rate, checkout completion, payment success	Prioritise UX and offer improvements
Are customers returning?	Repeat purchase rate, 90-day active customers	Adjust retention programmes
Are campaigns profitable?	Revenue per recipient, conversion, unsubscribe rate	Scale or stop campaigns
Where is demand strongest?	Searches, wishlist demand, category and brand views	Merchandising and inventory planning
Is the digital experience healthy?	Web Vitals, errors, abandonment and load performance	Technical investment priorities

Management recommendation: review a small set of commercial and customer-health metrics weekly. Avoid reporting activity metrics such as “emails sent” without revenue, engagement and opt-out outcomes.

M

Marketing team

How to turn platform capabilities into a repeatable growth system

MARKETING BENEFITS

One lifecycle, multiple coordinated channels

Marketing can manage acquisition, on-site conversion and retention from shared customer signals rather than running disconnected promotions.

ACQUIRE

Reach

- SEO-ready catalogue and brand routes
- Campaign landing pages
- Seasonal homepage merchandising
- Store QR and gamified entry points

CONVERT

Persuade

- Offers and coupon campaigns
- Featured products and curated sections
- Trust content and product comparison
- Cart and checkout conversion nudges

RETAIN

Re-engage

- Email campaigns and templates
- WhatsApp communication integration
- Cart and wishlist lifecycle triggers
- Segments based on value and activity

Campaign briefing template

Field	Required decision	Example
Objective	One measurable commercial outcome	Recover high-value carts
Audience	Who qualifies and who must be excluded	Cart older than 2 hours; no completed order
Offer	Reason to act and commercial guardrail	Helpful reminder; optional limited coupon
Channel	Best channel for urgency and consent	Email first, WhatsApp only if opted in
Destination	Exact page that continues the promise	Restored cart or focused campaign page
Measurement	Success, failure and customer-health KPIs	Recovered revenue, conversion, unsubscribe

Operating rule: segment first, message second. A smaller relevant audience is more valuable than a broad campaign that trains customers to ignore the brand.

O

Operations and technical teams

What must be configured, monitored and governed

DELIVERY RESPONSIBILITIES

Reliable marketing depends on reliable operations

Campaign success requires accurate catalogue data, valid customer consent, configured channels, secure scheduling and clear ownership of failures.

Capability	Platform position	Operational requirement	Owner
Email campaigns	AVAILABLE	Configure SMTP, sender identity, templates and test delivery	Marketing + Technical
WhatsApp messaging	SETUP REQUIRED	Configure AskEva credentials, approved templates, opt-in and fallback	Marketing + Technical
Cart recovery	SCHEDULER REQUIRED	Connect secure cron trigger, test dry run, monitor sends and cap frequency	Technical + CRM
Wishlist alerts	SCHEDULER REQUIRED	Define price-drop/restock rules and connect scheduled execution	Merchandising + Technical
Lifecycle reminders	SCHEDULER REQUIRED	Approve lifecycle rules, timing, exclusions and message content	CRM + Technical
Customer segmentation	AVAILABLE	Rebuild profiles, validate segment definitions and suppress ineligible users	CRM / Analytics
Campaign pages	AVAILABLE	Prepare creative, products, slug, dates, tracking and QA	Marketing + Merchandising
Analytics	AVAILABLE	Confirm GA4/event settings, naming standards and dashboard ownership	Analytics + Technical

Pre-launch controls

- ✓ Product price, stock and images are current
- ✓ Audience count matches the segment rule
- ✓ Unsubscribed users are excluded
- ✓ Links open the correct campaign destination
- ✓ Coupon eligibility and expiry are tested
- ✓ Email and mobile rendering are reviewed
- ✓ Tracking parameters follow the naming standard
- ✓ A campaign owner and rollback plan are assigned

Risk control: automated sends should fail visibly. Channel errors, scheduler failures and invalid configuration must create an operational alert rather than silently appearing successful.

OPERATING MODEL

The customer marketing system

The setup should connect customer signals to decisions, messages, destinations and measurement.

INPUT	DECISION	MESSAGE	DELIVERY	ACTION	LEARNING
Signals	**Segments**	**Campaign**	**Channel**	**Destination**	**Measure**
Search, view, cart, wishlist, order	Value, recency, intent, consent	Offer, content, timing	On-site, email, WhatsApp	Product, cart, campaign, store	Revenue, conversion, health

1. Data and identity

Use account, profile, order, cart, wishlist, campaign and preference data. Identity must come from the authenticated session; consent status governs communication eligibility.

2. Segmentation

Create mutually understandable segments such as new, active, high-value, dormant, cart-intent, wishlist-intent and category-interest. Document entry and exit rules.

3. Content and offer

Maintain reusable templates for new products, promotional codes, major sales, festivals and custom messages. Keep product and offer claims consistent with the destination page.

4. Orchestration

Define trigger, delay, channel, frequency cap, exclusion and stop condition. Scheduled journeys require a secure external scheduler and cron secret.

5. Delivery channels

Use on-site merchandising for all visitors, email for rich lifecycle content and WhatsApp for consented, timely communication. Do not send the same message everywhere by default.

6. Measurement and learning

Track campaign identity from message to destination and order. Compare against a baseline or control group where practical, then record the learning for the next campaign.

Minimum viable setup: one agreed segment dictionary, one campaign naming standard, one consent policy, one measurement dashboard and one accountable owner per campaign.

ACQUISITION AND CONVERSION

Turn campaigns into connected shopping journeys

Every acquisition campaign should land on a page that continues the message and makes the next action obvious.

Campaign type	Audience	Experience destination	Primary measure
Brand launch	Category and brand prospects	Brand page with hero, categories, products and lead path	Product views and assisted conversion
Festival / seasonal sale	Broad qualified audience	Campaign page with selected products, offers and expiry	Revenue and conversion
New product announcement	Relevant category-interest segment	Product detail or focused collection	Qualified visits, wishlist and sales
Store activation	Local and in-store audience	QR entry, store page, spin wheel or campaign landing	Visits, leads and store-attributed action
Coupon promotion	Eligibility-based segment	Products where the coupon is valid	Redemption and incremental margin

Conversion setup by page

LANDING PAGE

- Match campaign headline and creative
- Show eligibility and end date
- Feature a single primary action
- Use campaign-specific tracking

PRODUCT PAGE

- Lead with availability and price
- Explain specifications and value
- Show review and trust content
- Keep add-to-cart action visible

CHECKOUT

- Preserve offer and cart context
- Validate coupons clearly
- Show itemised total before payment
- Measure payment and form failures

Recommended acquisition tracking convention

Campaign name: YYYYMM_objective_audience_offer | **UTM source:** channel or partner | **UTM medium:** paid-social, email, whatsapp, qr, organic | **UTM campaign:** the campaign name.

Commercial guardrail: discount is not the only conversion tool. Improve product clarity, delivery confidence, trust, financing visibility and service value before increasing promotional cost.

RETENTION AND SEGMENTATION

Use customer intent to create useful follow-up

Retention should begin with the customer's context: what they considered, what they bought, how recently they engaged and what communication they permitted.

Segment	Entry signal	Recommended journey	Guardrail
New subscriber	Account or marketing opt-in	Welcome, value proposition, store and category discovery	Do not immediately overload with promotions
High-intent cart	Cart with no completed order	Reminder, assistance, stock or offer context	Stop after order; cap reminders
Wishlist intent	Saved product	Price-drop, restock or product-update alert	Only message on meaningful change
First-time buyer	First completed order	Delivery guidance, support, review and next-best category	Prioritise service over immediate upsell
High-value customer	Spend/order threshold	Early access, service benefits and curated recommendations	Use margin-aware rewards
Dormant customer	No meaningful activity for defined period	Preference check, relevant category news or reactivation offer	Stop if unresponsive; protect sender reputation

Recommended lifecycle sequence

IMMEDIATELY — Transactional
Confirmation, payment, delivery and service messages. These must be accurate, timely and separate from promotion.

SHORT TERM — Assistance
Help incomplete journeys: abandoned cart, failed payment, product questions or delivery uncertainty.

MEDIUM TERM — Value
Relevant product education, complementary categories, wishlist changes and service reminders.

LONG TERM — Relationship
Replenishment, upgrade cycles, seasonal needs, loyalty recognition and local store engagement.

Activation note: retention routes support dry-run operation and secure cron authentication. Launch each automation in dry-run mode, validate audience and message volume, then enable scheduled delivery.

CHANNELS AND MEASUREMENT

Choose the right channel and measure the full outcome

Channel choice should depend on urgency, content depth, customer preference and consent.

On-site

Best for: merchandising, broad promotions, contextual offers and product education.
Tools: hero slides, home sections, banners, campaign pages, offers and featured products.
Measure: engagement, product views, add-to-cart and conversion.

Email

Best for: rich campaigns, product stories, lifecycle content and less urgent reminders.
Tools: templates, recipient selection, segments, batch sending and campaign history.
Measure: delivery, click, conversion, revenue and unsubscribe.

WhatsApp

Best for: consented, timely and concise communication with a clear action.
Tools: AskEva integration used by notification workflows; configuration is required.
Measure: delivery, response, conversion and opt-out.

Measurement framework

Layer	Core measures	What it reveals
Reach	Qualified sessions, source, campaign visits	Whether the intended audience arrived
Engagement	Search, filters, product views, wishlist, compare	Whether the content helped evaluation
Conversion	Add-to-cart, checkout start, payment success, orders	Where buying intent becomes revenue or drops
Retention	Repeat orders, recovered carts, reactivation, active customers	Whether the relationship continues
Customer health	Unsubscribe, complaint, failed sends, support contact	Whether growth activity damages trust
Experience health	Web Vitals, errors, latency and failed API actions	Whether technical quality limits commercial results

Revenue
COMMERCIAL RESULT

Conversion
JOURNEY EFFECTIVENESS

Retention
RELATIONSHIP VALUE

Opt-out
CUSTOMER GUARDRAIL

Reporting standard: every campaign report should state objective, audience, cost or discount, delivered volume, conversion, revenue, customer-health impact and the next decision.

ACTIVATION PLAN

A practical four-phase rollout

Start with foundations and one measurable journey. Expand only after delivery, consent and reporting are reliable.

PHASE 1
Foundation

Goal: make data, channels and ownership trustworthy.
Confirm sender configuration, WhatsApp setup, consent rules, campaign naming, analytics events, segment definitions, product data quality and responsible owners.

PHASE 2
Conversion

Goal: improve the existing buying journey.
Review top landing pages, product detail clarity, coupon experience, checkout errors, payment success, mobile usability and campaign-to-page consistency.

PHASE 3
Retention pilot

Goal: activate one controlled lifecycle journey.
Connect the scheduler, run cart recovery in dry-run mode, validate exclusions and frequency, enable a limited audience, then measure recovered revenue and opt-outs.

PHASE 4
Scale

Goal: add journeys without adding noise.
Introduce wishlist alerts, lifecycle reminders, high-value recognition, dormant reactivation, seasonal campaigns and controlled experimentation.

Definition of success

Customer
Less effort, greater confidence and useful communication.

Marketing
Repeatable campaigns with attributable outcomes.

Operations
Clear ownership, reliable execution and visible failures.

Business
Higher conversion, retention and lifetime value without harming trust.

Recommended first action: complete the marketing foundation checklist, then launch one cart-recovery pilot with a defined audience, dry run, frequency cap and revenue dashboard.

This document is designed for screen presentation and A4 PDF export. In a browser, use **Print > Save as PDF**, enable background graphics, choose A4, and set margins to none.
